Ideal to measure the fastening or breakaway torque of bolts and nuts.

The DTD-S range of static/reaction torque transducers have a square drive and are designed specifically for the measurement of direct torque, particularly in a torque tool calibration, testing or QA environment. Typical uses include measuring the fastening or breakaway torque of bolts and nuts and they are also ideal for calibrating automated torque screwdrivers, spanners and wrenches.

All ranges are constructed from stainless steel and are environmentally protected to IP65 as standard. The sensor is provided with an integral cable gland and 3 metres of cable on ranges up to 1000Nm, thereafter electrical connection is made by a robust bayonet lock military connector for quick and easy connection purposes, a mating half is also supplied with 3 metres of cable fitted.

The DTD-S can be customised to suit your particular application, including custom drive sizes and fixing configurations, as well as versions with sealing to IP68 submersible for applications where operating conditions are particularly harsh or involve total submersion.

Please consult our expert sales team to discuss your application in detail and visit our website to see our range of static reaction torque sensors.
